

Fire Design Solutions

Summary Brochure

EcoSmart Fire, Endless Possibilities

An EcoSmart Fire is a bespoke piece of industrially designed fire furniture that exudes warmth, burns cleanly, and defines a space without dominating it. From luxury resorts to commercial showrooms and residential settings, EcoSmart is embraced by the world's leading architects, designers, developers, landscapers – and style savvy homeowners.

Fuelled by e-NRG Bioethanol

Formulated for use in ventless ethanol fireplaces, e-NRG is the cleanest, most efficient liquid bioethanol fuel on the market and produces the best flame each and every time. Easily ordered online and delivered directly to your door. Visit e-nrg.com

Clean Burning

e-NRG produces no harmful emissions, just heat, steam and carbon dioxide which is re-absorbed by plants, this means no soot, no smoke, no ash and no mess.

No Gas, No Flue, No Electricity

Our ethanol burners are self-contained and require no gas or electrical utility connections - speeding up installation.

Efficiency Over 90%

No flue or chimney means that the heat generated by the fireplace during combustion isn't lost up the chimney.

Quick & Easy Installation

Simply insert a firebox into a standard building frame, or drop a burner into a built cut-out. Or choose one of our freestanding models which require no installation, simply unpack, put into position, and off you go.

Indoor & Outdoor Models

Our extensive collection offers you unprecedented choice and is the perfect solution to any design or decor.
